RAILWORKS 3

user created route by SAD

version 2

Altenburg - Wildau

Altenburg-Wildau (v2.0) or TS 2012–Railworks 3

Content:

- Terms of use.
- In this package.
- Install.
- Additive information Köblitzer Bergland owners.
- Information route Developers using my tracks.

Terms of use:

- Route, Scenario's, vehicles and assets are freeware. It may be used in own routes and scenario's.
- Assets may be copied and altered (repaint)by other developers, unless asset folder and editor name is changed, so it won't replace SAD assets.
- Don't include unchanged assets and vehicles in your own build. People should download my route first, before downloading and installing an other route with unchanged SAD assets.
- Commercial usage only with permission, please contact me. Send me a pm via www.uktrainsim.com or www.rail-sim.de

In this package:

- route Altenburg-Wildau (in original route folder, Köblitzer Bergland route will remain unharmed)
- All assets needed for the route. Many assets are updated for RW3. Some new assets are added.
- SAD Liebherr 900-3 engine, upgraded to RW3
- New tracks for better performance in RW3
- lights.
- 4 basic scenario's and 2 free roam scenario's.(only in English)

Install

Please backup the SAD assets folder (Assets/SAD) before installing. In case something went wrong you can place it back.

Also backup the content/routes/7ecaf8d4-8aac-.... Route folder.

Start Railworks, install the rwp file in the Package manager Tab.

Additive information for Köblitzer Bergland users:

Installing this package will replace all files within the SAD asset folder. This will also change the tracks and some assets in the Köblitzer Bergland route. This will also improve performance of that route. The loadingscreen is also replaced by this package because the routes are using the same route template. (please backup the old loadingscreen if you don't want this replacement

(assets/SAD/GermanLocal/templateroutes/loadingscreen2.TgPcDx)

Additive information for Route Developers using my tracks:

My tracks are changed into 2D tracks. (3d rails and trackbed, sleepers in texture). If you don't want these new tracks, you could backup the SAD/Network folder. But all improvements shall not work. (lightning on the rails and trackbed, also the catenary poles and other assets in this folder won't be updated.) Better is to wait for a version with the 3D tracks. (also at Rail-sim.de)

Extra freeware downloads needed for Scenario's

-Dispo_train_version 1 (Astauder, RailSim)

www.rail-sim.de/railsimnew/index.php/de/downloads/viewdownload/60-diesel/303-er20--dispo-zug-v1

-Avmz_and_Bimz_repaints_by_Dave (Repaints by DAVE)

www.rail-sim.de/railsimnew/index.php/de/downloads/viewdownload/63-personenwaggons/621-avmz-and-bimz-repaints-by-dave

-KRS-european_container_pack_by_news_v2 (NewS)

www.rail-sim.de/railsimnew/index.php/de/downloads/viewdownload/32-gueterwagen/246-european-container-pack-by-news-v20
